HEALTHCARE LIMITED

THUASNE GROUP

is over 170 years old

From its Saint-Etienne base, THUASNE Group has been drawing on its know-how for more than 170 years to conceive, develop and manufacture medical devices enabling all patients and consumers to become active players in their own health.

Derived from the shared history of 6 generations of entrepreneurs, THUASNE offers concrete, simple, adapted and innovative health solutions for improved mobility, in more than 85 countries. Our expertise is aimed at patients in the fields of orthopaedics (belts, braces), medical compression (phlebology, lymphology, wound healing), women's health (external breast forms, lingerie) and homecare.

With its operations spanning the worlds of medicine, materials and digital technology, Thuasne creates and distributes medical devices enabling all patients and consumers to become active players in their own health. Year after year, our joint commitment enables better management of numerous chronic conditions (back problems, musculoskeletal disorders, venous insufficiency, lymphoedema, etc.) using non-invasive therapeutic solutions

Elizabeth Ducottet
Chairman and CEO

A handwritten signature in black ink, appearing to read "Elizabeth Ducottet". The signature is fluid and cursive, with a small dot at the end.

What is Lymphoedema?

Lymphoedema is a chronic disease related to a malfunction of the lymphatic system.

This results from a blockage or a slowing down of the circulation of this liquid between the cells and tissues of the body.

Lymph accumulated in the subcutaneous tissues causes swelling that **produces discomfort, heaviness and loss of mobility in the affected part of the body.**

There are 2 types of lymphoedema:

Primary lymphoedema

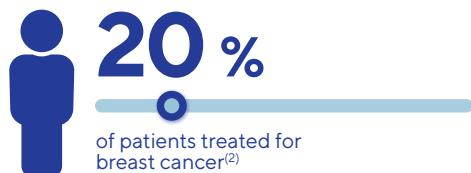

Related to a constitutional defect of the lymphatic system. Congenital or familial, it mainly affects the lower limbs. In the majority of cases, it is necessary to initiate management of the condition from childhood. Primary lymphoedema can also start in young adults.

Secondary lymphoedema

Results from a damage of the lymphatic system associated with a trauma, a disease like cancer and its treatment (lymph node dissection, radiotherapy...) or a contamination.

Secondary lymphoedema concerns

(1) Orphanet, webportal on rare diseases and orphan drugs, www.orpha.net : Primary lymphoedema – November 2007 – Document prepared in collaboration with: Dr Stephane Vignes /Consultation of the reference center for rare vascular diseases, Cognacq-Jay Hospital, Paris.

Radiat Oncol. 2013 Nov 19;8:271 Low rate of lymphoedema after extended pelvic lymphadenectomy followed by pelvic irradiation of node-positive prostate cancer.

Lymphoedema Stages

There are **4 stages of lymphoedema**.

Those stages can be grouped in **3 levels of severity**:

Mild

STAGE 0

- Swelling is hardly visible
- Symptoms are: heaviness of the affected limb, slight tingling and fatigue
- Takes several months or even years for the edema to appear

STAGE I

- Positive pitting sign possible
- Skin and tissue are not permanently damaged
- Reversible lymphoedema
- Volume excess is below 20%

Moderate

STAGE II

- Positive pitting sign
- Skin folds, inflammations and cutaneous modifications
- Non reversible edema
- Volume excess is between 20 and 40%
- Increased risk of skin infection

LATE STAGE II

- Positive Stemmer Kaposi sign
- Tissue fibrosis
- Permanent edema
- Skin folds, inflammations and cutaneous modifications
- Volume excess is between 20 and 40%
- Increased risk of skin infection

Severe

STAGE III

- Very voluminous limb
- Non regular limb shape with skin folds
- Permanent edema
- Negative pitting sign
- Dermatological complications
- Volume excess is above 40%
- Mobility decrease

Management of Lymphoedema

Patients presenting lymphedema should benefit from coordinated management and receive information adapted to their needs.

The main objectives of the treatment are:

- Reduction, then stabilization of the volume
- Improvement of the limb function
- Prevention of complication risks
- Patient education and psycho-social support

This chronic disease therefore requires continuous management, which can be split into two essential and complementary phases:

The reduction phase

The maintenance phase

that will follow one another depending on the evolution of the lymphoedema

Medical compression is one of the key elements of the treatment

The reduction phase

The reduction phase is also known as the intensive decongestive treatment.

Its goal is to achieve maximum reduction of the edema to come as close as possible to the volume of the opposite healthy limb.

THUASNE Protocol

The reduction phase is usually performed **using multi-component bandages**

The advantage of bandages is that they can be repositioned over and over to ensure the best possible fit to successive variations in edema volume.

There are different sorts of bandages and it is their combined use that reduces edema.

PROTECT the skin

SHORT-STRETCH COTTON BANDAGE

In direct contact with the skin, this tubular cotton bandage provides tight containment of the limb. Made of cotton, it provides soft and lined protection of the skin weakened by the lymphoedema.

MOBILIZE the edema

MOBIDERM BANDAGE

Used under a reducing bandage, the Mobiderm technology mobilizes edematous or indurated subcutaneous tissue.

CONTAIN the edema

BIFLEXIDEAL® SHORT-STRETCH BANDAGE

A short-stretch bandage (<100% stretch) as the third layer helps containment of the edema, as well as drainage in case of physical activity (high working pressure)⁽²⁾.

COMPRESS the edema

BIFLEX MEDIUM-STRETCH BANDAGE

A medium-stretch bandage as last layer applies constant pressure, even at rest.

BIFLEX 16+ (light) is recommended for mild to moderate lymphedema.

BIFLEX 17+ (strong) is recommended for moderate to severe lymphedema.

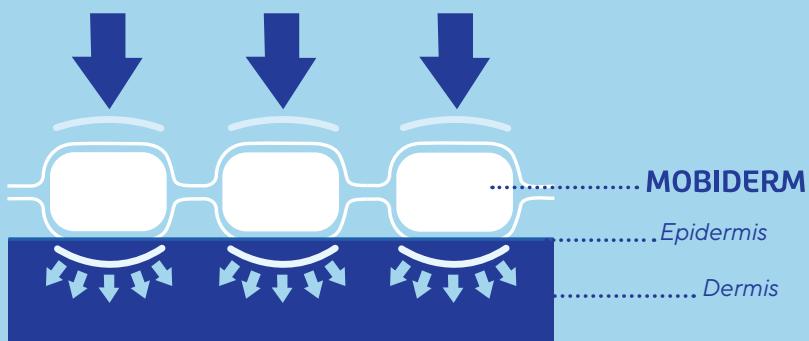

The MOBIDERM Technology

MOBIDERM is a medical device made up of foam blocks encased between two non-woven bandages.

The **MOBIDERM** Technology can be used under a reducing bandage (in its bandage or pad forms), or incorporated into mobilizing garments.

Due to the difference in pressure created between the support area of the blocks and their surrounding area, **it promotes the flow of lymphatic fluid and optimizes the drainage efficacy⁽¹⁾.**

EFFECTIVE

- Rapid volume reduction of the edema.

PRACTICAL

- Light and comfortable, it enables the patient to keep their freedom of movement.

COMFORTABLE

- Soft on the skin
- Ability of the product to contour the extremity provides a superior anatomical fit.

MOBIDERM Pads

| Dimensions | Designation | Reference | Medivex Reference |
|-------------|--------------------------|-----------------|-------------------|
| 25 cm x 1 m | Small blocks 5 mm x 5 mm | 371001 03310001 | Mobi - 105 |
| 20 cm x 1 m | Big blocks 15 mm x 15 mm | 371001 03310002 | Mobi - 106 |

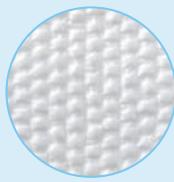

MOBIDERM Bandages

| Dimensions | Designation | Reference | Medivex Reference |
|-------------|--------------------------|-----------------|-------------------|
| 10 cm x 3 m | Small blocks 5 mm x 5 mm | 372001 01030001 | Mobi - 107 |
| | Big blocks 15 mm x 15 mm | 372001 01030002 | Mobi - 108 |

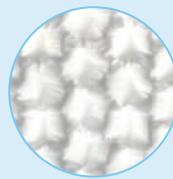

2 block sizes

SMALL BLOCKS

- More effective in highly induced areas
- Better adapted to small anatomies (pediatric patients, hands/foot, breast, ...)

BIG BLOCKS

- Better adapted along the limb

Compression bandages

Cutaneous protection

SHORT-STRETCH COTTON BANDAGE Non-elastic bandage

Tubular bandage. Composition 100% cotton.
Protection of skin surface under non-adhesive bandage.

| Width | Length | Color | Reference | Medivex Reference |
|-------|--------|-------|-----------------|-------------------|
| 11 cm | 4 m | White | 010101 01140000 | Mobi - 104 |

PROTECTIVE UNDERWRAP Thin stretch foam bandage

Protection of skin surface under adhesive bandage.

| Width | Length | Color | Reference | Medivex Reference |
|-------|--------|-------|-------------|-------------------|
| 7 cm | 27 m | White | 550709 1000 | Mobi - 111 |

Containment

BIFLEXIDEAL® Short-stretch compression bandage

Made of cotton and viscose, it is a soft and breathable bandage.
51.6% maximum stretch.⁽¹⁾

| Width | Length | Color | Reference | Medivex Reference |
|-------|--------|-------|-----------------|-------------------|
| 3 cm | 5 m | White | 110002 00350000 | Mobi - 102 |
| 8 cm | 5 m | White | 110002 00850000 | Mobi - 103 |

BIPLAST Adhesive short-stretch compression bandage

Herringbone adhesive application. Multidirectional adhesive-ness right to the edge of the bandage. Flexible and adjustable.
50.2% maximum stretch.⁽²⁾

| Width | Length | Color | Reference | Medivex Reference |
|-------|--------|-------|-----------------|-------------------|
| 3 cm | 2.5 m | White | 200001 00325000 | Mobi - 109 |
| 10 cm | 2.5 m | White | 200001 01025000 | Mobi - 110 |

Compression bandages

Compression

BIFLEX+ PRATIC

Medium-stretch graduated elastic compression bandage with stirrup

Fitting stirrup makes this bandage easy to use. Enhances patient autonomy. Time saving for caregivers at home or at the hospital. 150.9% maximum stretch.⁽¹⁾

| Designation | Width | Length | Color | Medivex Reference |
|--------------------------------------|-------|--------|-------|-------------------|
| BIFLEX 16+ PRATIC (Light) | 10 cm | 3 m | Beige | Mobi - 119 |
| BIFLEX 17+ PRATIC (Strong) | 10 cm | 3 m | Beige | Mobi - 120 |

FOAM BANDAGE

Emulsified latex foam

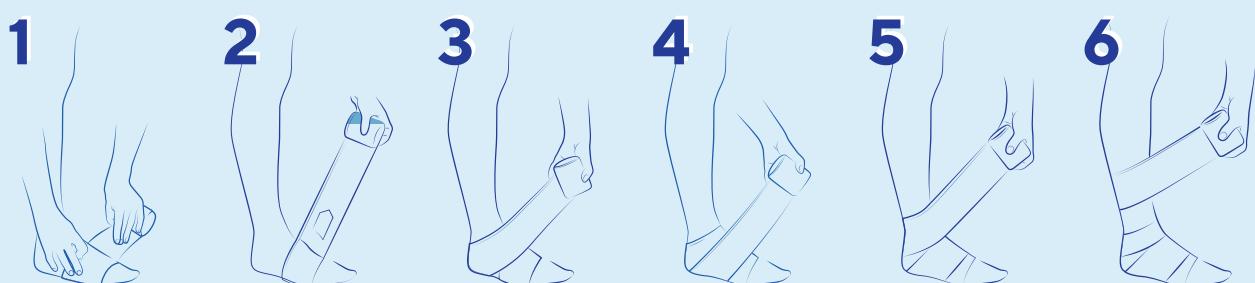

Optimization of compression treatment by levelling out of anatomical relief.

The bevelled cut makes it possible to overlap the bandage as it is wrapped around without making it too thick.

Thanks to open cells foam, the bandage is permeable to air and helps preventing the risk of wound maceration.

| Thickness | Width | Length | Medivex Reference |
|-----------|-------|--------|-------------------|
| 8 mm | 8 cm | 1m | Mobi - 112 |
| 12 mm | 10 cm | 1m | Mobi - 113 |

Q Pratic stirrup application

1 Slip on the stirrup

2 Seam on the top of the foot

3 1st turn around the heel

4 2nd turn securing from the bottom

5 3rd turn securing from the top

6 Circular application

The **maintenance** phase

As soon a satisfactory volume reduction is achieved, the maintenance phase of the lymphoedema starts.

Its role is to stabilize the volume of the reduced limb in the initial phase, or even to continue the volume reduction, but also to avoid relapses and enable the patient to recover normal mobility.

This phase is conducted first with elastic compression garments which will be renewed regularly under the supervision of a healthcare professional.

Worn daily from waking up to bedtime, day-time compression garments ensure both:

- **compression** aimed at easing the circulation of the lymph to the heart, thus preventing the formation of edema.
- **containment** preventing the edema from recovering more than a certain percentage of volume, irrespective of its intrinsic expansion force.

A variety of garment models are available (stockings, sleeves...) in several compression classes.

| Class | France (AFNOR G30 102B STANDARD) | Germany (RAL-GZ 387:2000 STANDARD) |
|---------|----------------------------------|------------------------------------|
| Class 1 | 15 - 20 mmHg | 23 - 32 mmHg |
| Class 2 | 20 - 36 mmHg | 34 - 46 mmHg |
| Class 3 | > 36 mmHg | > 49 mmHg |

To optimize treatment efficiency, it is recommended to wear light compression device during rest and night-time.

MOBIDERM garments have been developed to mobilize the edema during rest and night-time. They offer an efficient, easy to use and comfortable alternative to self-bandage.⁽¹⁾

The maintenance phase also includes manual lymphatic drainage at a lesser frequency, as well as the learning of self-massaging and self-bandaging as needed. Lastly, it requires the practice of an adapted physical activity, skin cares and regular medical monitoring.

For rest and night-time treatment

MOBIDERM GARMENTS

In order to maintain results obtained during the intensive phase of multi-component bandages application, the patient must have access, during the maintenance phase, to a permanent and comfortable treatment.

Patient's autonomy will contribute to observance of the treatment prescribed and can guarantee its long-term success.

Taking over from day-time compression and as an alternative to self-bandage, **MOBIDERM** garments have been developed to continue mobilizing the edema during the night, and thereby reinforce the effects of the day-time treatment.⁽¹⁾⁽²⁾

These garments are made of a soft elastic material designed to deliver a soft pressure, well-accepted by patients in the rest and night-time phase⁽²⁾. They are fitted with the **MOBIDERM** Technology on the inside, which helps promoting lymphatic circulation with micro-massages.

Effective

- Reinforce the effects of the day-time treatment⁽¹⁾⁽²⁾
- Maintains the volume reduction of the edema⁽²⁾

Ease of use

- Enhances patient's autonomy and self-management
- A single garment to put on

Comfortable

- Unintrusive and discreet treatment⁽²⁾
- Do not disturb the sleep⁽²⁾

MOBIDERM autofit

Standard adjustable mobilizing garments

Description

The **MOBIDERM** **autofit** garments are designed to mobilize edematous or indurated subcutaneous tissues.

They are intended for the treatment of lymphoedema in maintenance phase for day and night to maintain the volume reduction.

The standard, self-adjustable garment adapts to most of patient's individual body shape and evolution overtime.

The are available in multiple models:

- For upper limb: **MOBIDERM** **autofit** armsleeve with mitten.
- For lower limb: **MOBIDERM** **autofit** below-knee or thigh-high.

For which patients

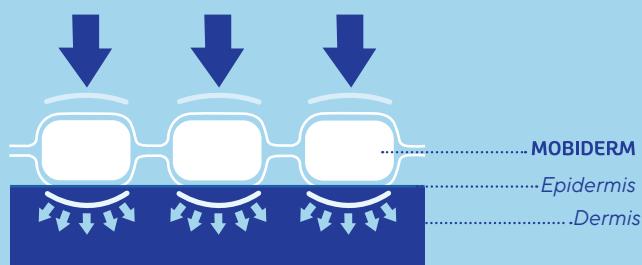

MOBIDERM **autofit** garments are recommended for patients presenting:

- Mild to moderate lymphoedema
- Regular or non-regular limb shape
- Stable or evolutive edema

Principle of action

The **MOBIDERM** **autofit** garments incorporate **MOBIDERM** technology that is made up of foam block encased between two non-woven bandages.

Due to the difference in pressure it creates between the support area of the blocks and their surrounding area, it helps stimulate the flow of lymphatic fluid and optimizes drainage efficacy.

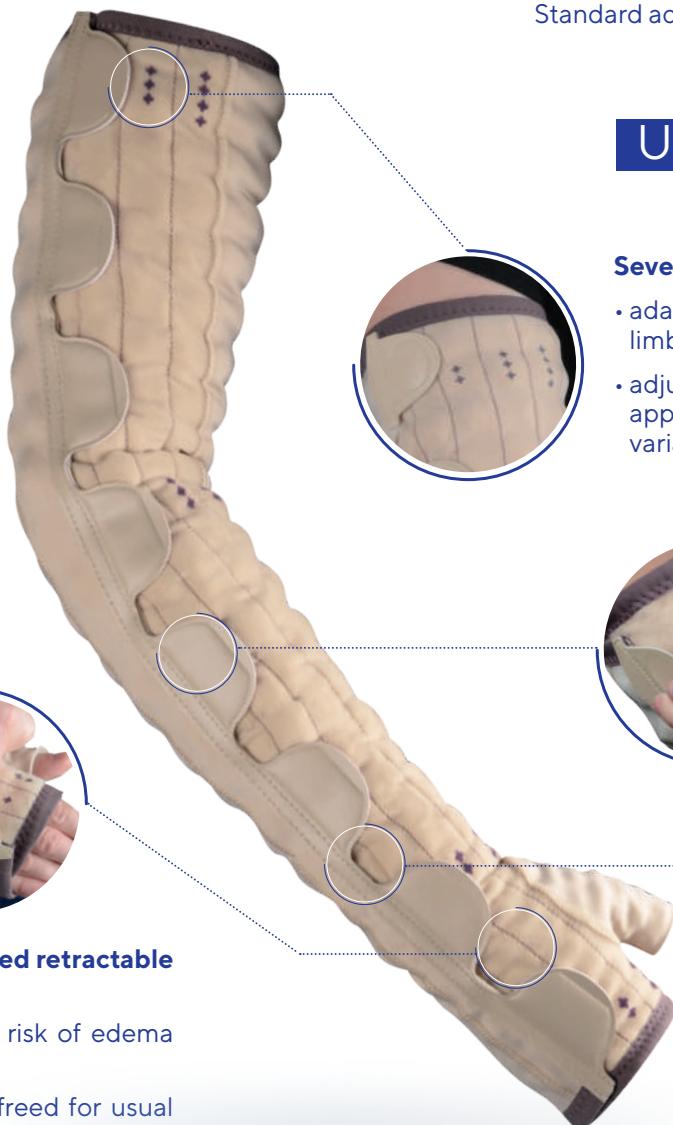

Characteristics

Composition

- Outer layer: polyester, polyamide, elastane
- Inner layer along the leg/arm: adhesive non-woven, polyurethane foam (15 x 15 mm blocks)
- Inner layer foot/ hand level: adhesive non-woven, polyethylene foam (5 x 5 mm blocks)

Color: beige

Compression class: around 15 mmHg

Sleeve with attached retractable mitten

- helps limiting the risk of edema migration
- the hand can be freed for usual tasks

Standard adjustable mobilizing garments

Upper limb

Several tightening notches

- adaptation to most of patient's individual limb shape
- adjustment marks: precise and repeatable application, control of the edema volume variation

Velcro fasteners

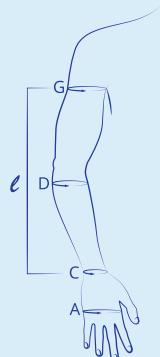

easy and quick set up⁽²⁾

Semi-open garment

easy to put on, easy to take off⁽²⁾

MOBIDERM STANDARD

Standard mobilizing garments

Standard products: **faster availability!**

Description

The **MOBIDERM** standard garments are designed to mobilize edematous or indurated subcutaneous tissues.

They are intended for the treatment of lymphedema in maintenance phase for day and night to maintain the volume reduction.

They are available in 3 models: armsleeve **1**, mitten **2** or glove **3**

For which patients

MOBIDERM standard garments are recommended for patients presenting:

- Mild to moderate lymphedema
- Regular limb shape
- Stable lymphedema volume

Characteristics

Composition⁽¹⁾:

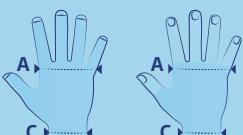

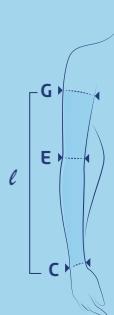

- Outer layer: polyamide, elastane
- Armsleeve inner layer: adhesive non-woven, polyurethane foam (15 x 15 mm blocks)
- Mitten and glove inner layer: adhesive non-woven, polyethylene foam (5 x 5 mm blocks)

Color: beige

Compression class: around 15 mmHg⁽²⁾

Sizes

A: Hand circumference (head of metacarpal bones)
C: Wrist circumference
E: Elbow circumference
G: Axillary arm circumference

Fitting Instructions

MOBIDERM garments can be worn directly on the skin or with a cotton layer in between in case of sensitive skin.

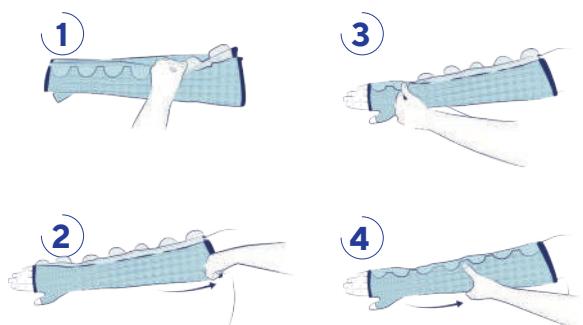

MOBIDERM MADE-TO-MEASURE PATIENT OR STANDARD

- Turn the garment over onto itself ①
- Slide the garment along the limb to the desired position ②
- Massage the limb to ensure an even distribution of foam blocks ③
- *For Mitten and Glove* - Make sure the foam blocks are positioned on top of the hand
- *For Mitten and Glove* - If combined with an armsleeve, position it over the armsleeve
- *For Mitten* - The garment is ambidextrous, simply flip it inside

MOBIDERM autofit

- Open all hook-and-loop fasteners ①
- Slide the garment along the limb to the desired position ②
- Close the hook-and-loop fasteners by starting with the distal extremity and moving up ③
- Proceed in several steps until you reach the setting recommended by your healthcare professional (+/++/++/+++++)
- Massage the limb to ensure an even distribution of foam blocks ④

Care Instructions

It is recommended to wash your **MOBIDERM** garment daily (or after each use).

ALL MOBIDERM GARMENTS

- Machine wash at wool cycle or cold temperature.
- Use a washing product without softener. Do not use detergents, fabric softeners or aggressive products (products containing chlorine).
- Place the garment in a wash bag to make sure other garments (particularly those with touch fasteners or zips) do not damage it.
- Dry well away from any direct heat source (radiator, sun, etc.).
- Do not tumble-dry.
- Do not iron.

MOBIDERM autofit

When not used, the garment should be kept flat, with the velcro fasteners closed. If it must be folded, position the hooks pointing outward.

DAILY EXERCISES

Upper limb lymphoedema:

Exercise

Arm stretching exercise on the wall

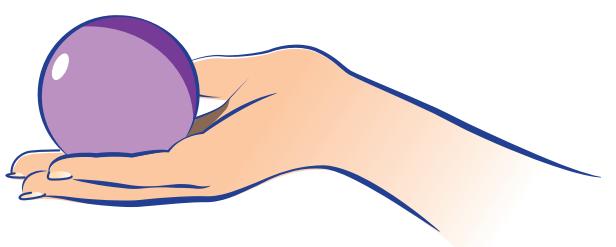

- Stand upright, well balanced, with legs slightly open, facing the wall
- Raise your arm slowly until you reach a point on the wall above your head
- Repeat this exercise slowly

Exercise

With a rubber ball

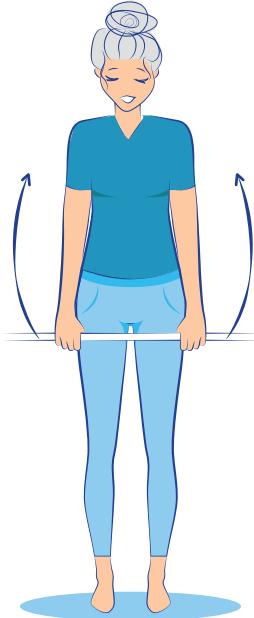

- Roll the ball in your hand on the affected side by raising your arm slightly
- Repeat this exercise regularly

How to take care of your lymphoedema

Exercise

With a stick

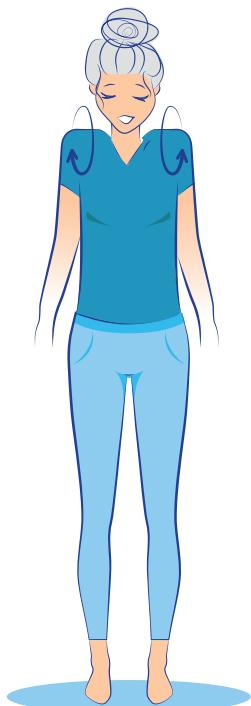

Stand upright, well balanced with legs slightly open, facing the wall

Without bending your elbows, raise your arms and place the stick above your head

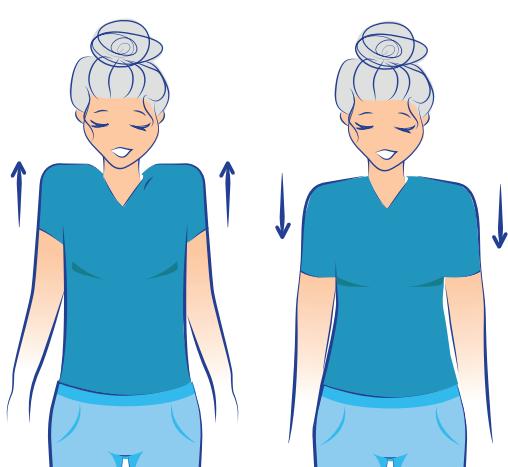

Stop at the top and bend your arms while slowly lowering the stick behind your head, keeping it horizontal

Exercise Shoulder movement

- Stand upright, well balanced, legs slightly open
- Sleep your arms at your sides and move your shoulder in small rotations

- After rotating both shoulders, raise and lower the shoulder
- Repeat for both shoulders

DAILY EXERCISES

Lower limb lymphoedema:

Exercise

Leg elevation

- Put yourself in an upright position, raising your legs on a chair, a desk, a stool... So that your heels are higher than your buttocks
- This will help promote the veno-lymphatic system

Exercise

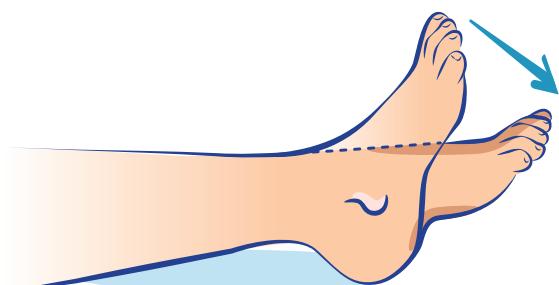

Lymph circulation stimulation

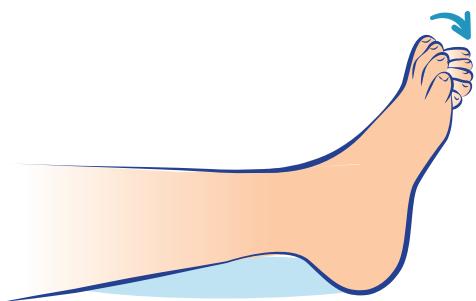

Make circles with your foot

Move your foot left to right

Stretch your foot, down then up

Bend and extend your toes

Repeat these exercises (only for the leg where your lymphoedema is located) several times a day, wearing your prescribed compression garments.
